AirLive adequately combines Networking and Smart Home IoT products to make life easier and smarter

- Since 1993, AirLive, powered by OvisLink Corp., has been firmly dedicated in continuing innovation of advanced network technology to provide high quality stable Networking and Smart Home products.
- AirLive IIoT LTE Gateway, Industrial switch, Auto-Topology switch, manageable PoE and Data LAN switches that bring optimizing efficiency in the Smart City, Industry and Enterprises as well as Small Business applications.
- AirLive Smart Home IoT solutions support various Macro Automation Applications that make our home to be smart home. The SmartLife Plus APP and AirLive IoT Cloud allow to manage multiple sets of AirLive Gateway. Even better, you can change or upgrade home automation remotely.
- AirLive, effectively, combines Network IIoT and Home IoT products together to make work and life easier.

Advanced and Unique Technologies

AirLive Visual Manageable L2+ Auto-Topology Gigabit PoE+ Switch Series

The Auto-Topology Gigabit Switch series automatically display network structure, status or device locations by using the browsers. MIS or administrator can know and/or maintain all connected devices' location, IP Address, MAC Address, VLAN group, Bandwidth, Power consumption and ONVIF Camera's live-streaming easily.

AirLive L2 Web Smart Managed Gigabit PoE+ Switch Series

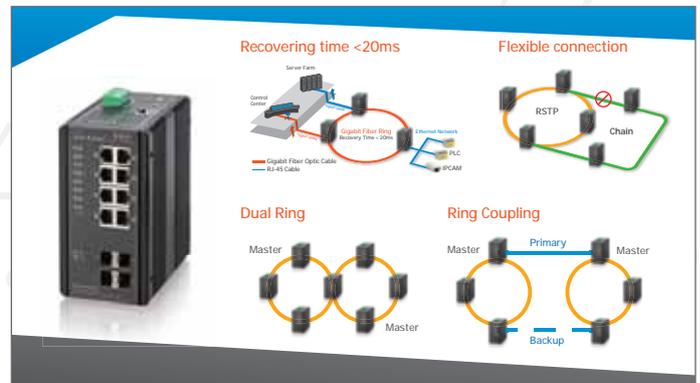

The L2 web managed Gigabit PoE+ switches are with 8/16/24 RJ45 and 2/4 SPF for Gigabit Networking connectivity.

20ms Faster Networking recovering Industrial Managed PoE+ Switches

AirLive Industrial Ring managed Switch is designed with embedded specific hardware to detect the network status and to provide recovering time faster than 20ms that ensures your network continues to operate without disruption.

Multiple Ports Industrial unmanaged Switches PoE+ or Ultra PoE

The multiple ports Industrial PoE+ or Ultra PoE switches, 10/8/6 ports, are designed for applications in harsh environments but where management functions are not required.

AirLive Industrial IoT (IIoT) Serial to LTE M2M

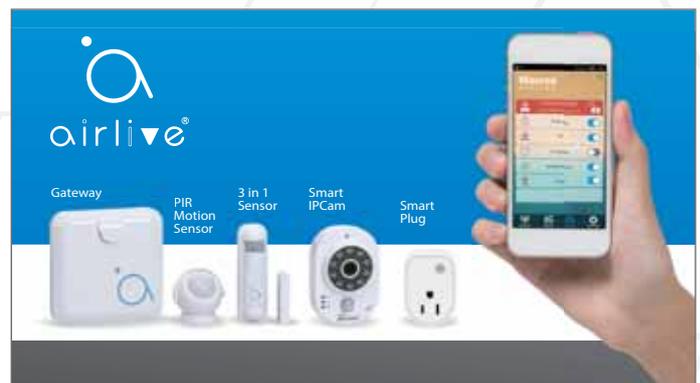

AirLive Serial to LTE gateway allows system integrators to connect legacy serial devices to Internet via wireless WAN (LTE/3G), providing many options for data acquisition, device management and industrial control anywhere without geographic limitation. The functions are getting more important for applications like Bank ATM, Retail Door Access, street PM2.5 collection, POS or Energy System. With GPS location, it can also be applied to public transportation to know where the bus, truck or vehicle is located.

Free Licensed IoT Cloud and APP to manage Home Automation remotely

AirLive Smart Home IoT is designed to bring comfortable life. You can do various event, Scenes or Macro settings with AirLive SmartLife Plus APP or IOT Cloud remotely.

AirLive IoT Cloud brings great advantages such as remotely management, multiple Gateway action in same or different locations, Google Home and Amazon Alexa Voice commands, monitoring data over browser, Google map,..and more.

AirLive Network IIoT and Home IoT products effectively combine our work and life!

Visual Manageable L2+ Auto-Topology

Gigabit PoE+ Switch Series

Deploy and locate your Network devices easier

The AirLive Auto-Topology Gigabit PoE+ Switch is a L2+ PoE Gigabit SNMP switch "plus" unique Graphical Management. The status-of-the-art Topology Switches can display IP Address, MAC Address, Location, VLAN group, Bandwidth, Power consumption and ONVIF Camera's live-streaming by using browsers. In addition, VLAN group can be set by simply few "click" in the browser. The e-Map or Floor-map view helps to find the device location quickly. The embedded PoE Device Guard will auto recover your crashed PoE AP/Camera. System Integrator or owner can visually check the device status without going to site. This brings down maintenance cost and increases network uptime.

Small Port PoE+ or PoE switch

For delivering both data and power over Cat.5 cables stably but no need for the management functions, you can trust AirLive unmanaged PoE+ switches. The AirLive unmanaged PoE+ switches are compliant with 802.3at/af standard that each port supports up to 30W power budget. With a large power budget, AirLive unmanaged switches ensure full power for connected PoE devices. In addition, AirLive also puts the SFP/SFP+ in our unmanaged Switches. For long distance optical connectivity, you also can use the unmanaged switch.

Manageable DATA LAN Gigabit Switch

24-port SPF Gigabit Fiber Connectivity - SNMP-24MGB Plus
 Web-smart Gigabit Switch - SNMP-GSH2804L

AirLive® SNMP LAN Switches are developed for SMB and Enterprise network connectivity.

The SNMP-24MGB Plus supports all-port Gigabit Fiber connectivity with wider temperature coverage -20~60°C and dual power input AC or 48Vdc.

The SNMP-GSH2804L is a L2 web-smart SNMP lite switch with 4-port SFP for fiber optics uplinking.

20ms Faster Networking recovering Industrial Managed PoE+ Switches

Redundant Networking for reliable data transmit applications

AirLive Industrial Ring Managed PoE Switch supports the best networking redundancy and dual power input for mission critical environments such as factory, traffic light or energy industry. In the event of a network cable or device failure, the AirLive Ring Industrial switch can provide recovery speed of less than 20ms. The ultra fast recovering time fully ensures that the network continues to operate without disruption. The embedded specific Ring includes "Dual Ring", "Ring Coupling" and "Dual Homing" for fast network redundancy. It also supports "Chain" technology that can expand established networking systems easily.

Industrial Unmanaged Switch

Industrial Grade with Wider Temperature Coverage

AirLive Unmanaged Industrial Switches support -40°C to 75°C in IP30/31 rugged strong housings with redundant power input that can work in harsh environments.

For applications where wider temperature coverage and strong housing is preferred as well as DC power input but where management functions are not required, the AirLive Unmanaged Industrial switches is the best choice.

The IGU-842POE is an Ultra PoE compliant Industrial Gigabit switch, providing 4UPOE*60W or 2UPOE*95W+2POE*30W. Total PoE budget is up to 240W. There are also 2 Gigabit uplink and 2 SFP ports.

AirLive Industrial switches are well suitable for application in deploying surveillance system, digital signage, and securing control and wireless service in demanding environments such as the factory or public transportation.

Smart Communication 4G/LTE

Industrial IoT (IIoT) M2M Serial to LTE or 4G/LTE gateway

The AirLive Industrial Cellular Gateways series include outdoor CPE, M2M Serial to LTE, and tiny remotely terminal unit for machine telemetry of Scada system.

For the locations where it's not possible or easy to have fixed landlines or for the application that needs to transmit serial data (RS232/RS485) from a remote side, the AirLive Industrial Grade 4G/LTE is the perfect solution.

Reliable LTE Cellular Gateway Applications

Reliable LTE Cellular Connectivity for Real-Time Traffic Monitoring

4G LTE acts as important smart applications in city, transportation or, green industry. To improve and monitor traffic flow and notice incidents, road operators usually use cameras and sensors to collect real-time traffic information as well as weather or air conditions.

Real Time Video Surveillance and Mobile WiFi in Bus/taxis

How to understand live situation in a moving bus is important especially in public transportation. Airlive LTE Gateway, VH-4GW or M2M-4GPOE, utilizes 4G LTE Technology which can transmit the camera or NVR streaming to a control room from the moving bus.

Providing Internet and WiFi Access to riders has become an essential service. The Gateway equips WiFi that is most suitable to be a WiFi hotspot for taxis, caravants, or recreation vehicles. The built-in GPS receiver can retrieve location data from global GPS satellite system, and then forward to remote servers. It is helpful to track locations of vehicles.

Location Free Telemetry at Instant

The ID-M2M is 4G based remote terminal unit (RTU) for machine telemetry of Scada system. With both Ethernet and serial interfaces, it can connect to both IP based network equipment and legacy serial device. With Cellular WAN, it is non-geographic limit and can install at instant. Administrator can manage system or initiate event to trigger action remotely.

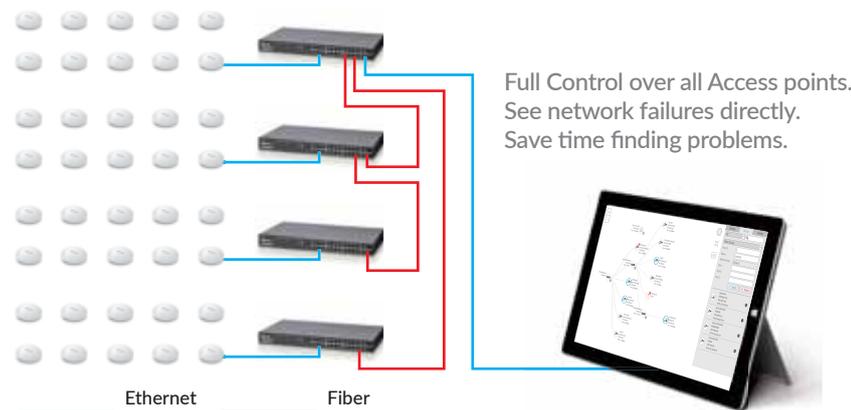

AirLive Smart Building Connection

Wireless Solution for Hotel

Overview

Hotel's Wi-Fi deployment by using AirLive's Access Point (AC.TOP) and PoE Switch (POE-GSH2624-370) in Mallorca, a famous summer holiday Tourism Island in Spain

Before the hotel owners decided to use the AirLive Solution, they were looking for a totally solution which could provide Wi-Fi coverage and was easy to manage for their hotels. The solution also had to be affordable and needed to be able to grow for future larger Wi-Fi demand. Finally they decided to use AirLive's Topology Device Managed Switch, POE-GSH2624-370 and Dual Band Ceiling Mount AP, AC.TOP for their hotels.

Why AirLive Solution

Combing AirLive's managed AP (AC.TOP/N.TOP) and device managed switches POE-GSH2624-370, provided the lowest cost solution for a Wi-Fi AP managed system. This because the Topology switch can directly manage all AC.TOP access points in the network. Saving time for the hotels MIS when for example 10 access points need to get a new SSID, all of them can be changed via the switch in one go.

Because AirLive's managed solution does not require an expensive license fee or has a limitation on number of AP. When there is the need to increase the Wi-Fi coverage, the hotel owners only need to add more AC.TOP and POE-GSH2624-370 and do not need to worry about any extra license fees.

POE-GSH2624-370 Full PoE power Topology Switch
Topology view, Map view, Google map, Graphical Vlan setup, 802.3at/af full power. 24 port Gigabit and 2 port SFP.

AC.TOP Dual band high power Ceiling mounted AP
2.4 and 5Ghz, 100 Concurrent users, high power output, build in Radius server. Gigabit network port.

AirLive small ports PoE Web Smart or Unmanaged Switch Series Specification

For reliable client-site PoE data and power transmission over Cat.5e or Cat.6 and higher cables at 100meters, you can rely on AirLive® Unmanaged PoE switch. The range of PoE unmanaged switches are 802.3af/at POE+ compliant. Each PoE port can be up to 30W which support full power for your PoE device. For Fiber optic connectivity, you can choice models with SFP. The POE-FSH808PW is 24V PoE web-smart management switch.

LAN Switch Series Specification

AirLive® SNMP LAN switches include L2+ SNMP Switch and Web-Smart switch as core switch for SMB or Enterprises. The SNMP-24MGB Plus is an all-fiber 24-port L2+ switch can be used to cluster all fiber connections from each floor or division. Even better, the SNMP-24MGB Plus supports dual power input for power redundant and a wider temperature -20~60°C coverage for harsh environment application capable.

Managed Industrial Switch Series Specification

AirLive® Industrial Managed Switches include Ring embedded or Auto-Topology Managed Switch. All of the switches provide non-blocking wire-speed performance and great flexibility for Ethernet extensions in harsh environments. Both series are equipped an IP30/31 rugged strong case with redundant power system and, a wider temperature range -40°C~75°C is supported. The Ring Embedded Series supports multiple Ring and Chain functions that works with any network topology with network recovery speed faster than 20ms. The Auto-Topology series supports visually management functions. AirLive® Industrial Switch is well suited for applications in deploying street surveillance system, Bank ATM connectivity, Securing access control and Wireless service in climatically demanding environments such as factory or public transportation.

Unmanaged Industrial Switch Series Specification

AirLive® Industrial Switches provide non-blocking wire-speed performance and great flexibility for Ethernet extension in harsh environments. It equips an IP30/31 rugged strong case with redundant power system, and a wider temperature range -40°C~75°C is supported.

The new All Gigabit Industrial PoE switch supports 12KV PoE surge protection. IGU-842POE can support up to 95W or 60W Ultra PoE. There are also Ultra PoE injectors in your option.

Reliable and Revolutionary with AirLive

The Exploration of Connected World

Smart Parking

Industrial Switch stands for wider temperature

Smart Factory

Ultra fast network recovering with Industrial Ring technology

Smart Factory

Multiple Ring and Chain Work with any network Topology

Smart Organization

Auto Topology networking and Camera Streaming

Smart Hotel

Auto Topology networking and Wi-Fi Access

Smart Security

PoE or Industrial Connectivity

Smart Environment

Industrial Serial to LTE reliable data communication

Smart Energy

Industrial Voltage Boost and PoE Power solution

Smart Transportation

Industrial grade LTE and GPS Location solution
