## Advanced AP/ Repeater Mode or Cloud Management

AP and Repeater Mode: In this mode the AirLive AWOD-12ACi works as an AP or Repeater, Which allows the installer to setup a network which covers an area of 100 to 200m (depending on environment). Or built a network connection over a longer distance between several buildings or cover a larger open area with multiple units in repeater mode.

Cloud Control: The AirLive AWOD-12ACi can be controlled via the Cloud (ONLY in AP Mode), ones the AP has been added to the Cloud. It can be controlled from any location. This offers extra benefits when dealing with a large network of Access Points, as direct access is not needed, and support can be giving from a remote office. Also, multiple levels of control can be giving in the Cloud from Admin to only viewer rights. AP's can be added and removed at anytime.
