

Q: How do I know if my battery needs to be replaced.

A: There are 3 ways to know if your battery needs to be replaced.

1. The LED on your battery powered devices will start to blink.
2. You will see a Red battery icon on the device which has low power in your Airlive SmartLife Plus app.

3. You can receive a notification when the battery has low power. To receive a notification you need to enable it first. To do this click on the icon of your sensor and scroll down to the “Notification” menu, open the menu and you can now enable the battery notification.
